

Last term

$$\frac{1}{2} + \frac{5}{6} + \frac{7}{12}$$

$$\frac{2}{5} + \frac{7}{20} + \frac{9}{10}$$

$$\frac{4}{15} + \frac{2}{3} + \frac{11}{30}$$

Work out the additions.

Previous learning

Complete the multiplications.

Give your answers as mixed numbers.

$$\triangleright \frac{3}{13} \times 5$$

$$\triangleright 6 \times \frac{5}{7}$$

$$\triangleright \frac{6}{11} \times 9$$

$$\triangleright 8 \times \frac{7}{12}$$

The bar model shows 20 counters shared equally into 5 groups.

Use the bar model to find the fractions of amounts.

$$\triangleright \frac{1}{5} \text{ of } 20 \quad \triangleright \frac{2}{5} \text{ of } 20 \quad \triangleright \frac{3}{5} \text{ of } 20 \quad \triangleright \frac{4}{5} \text{ of } 20 \quad \triangleright \frac{5}{5} \text{ of } 20$$
