

# What does maths look like at St John's?

At St John's, all staff set high expectations for all pupils, which results in good progress for all.

Children will be encouraged to develop a love of maths and a drive and resilience to tackle tricky problems.

The CPA approach will be used to help provide children with a secure understanding and foundations to build upon.

Our maths curriculum will incorporate three elements of the maths curriculum: fluency, reasoning and problem solving

Pupils will be taught a range of strategies to help them develop their independence and actively take a role and responsibility in their own learning.

Effective AFL strategies will be used to build upon children's existing knowledge and understanding.

Additional support will be given to address misconceptions/for those who did not fully grasp concepts or to extend children's learning and provide further challenge.
